Staff includes Chief, Fieldworker (FW), Detective & Warden.
RegistrationStatus here can be "Undecided", "Accepted" or "Rejected", which shows if the staff member has been accepted by the chief

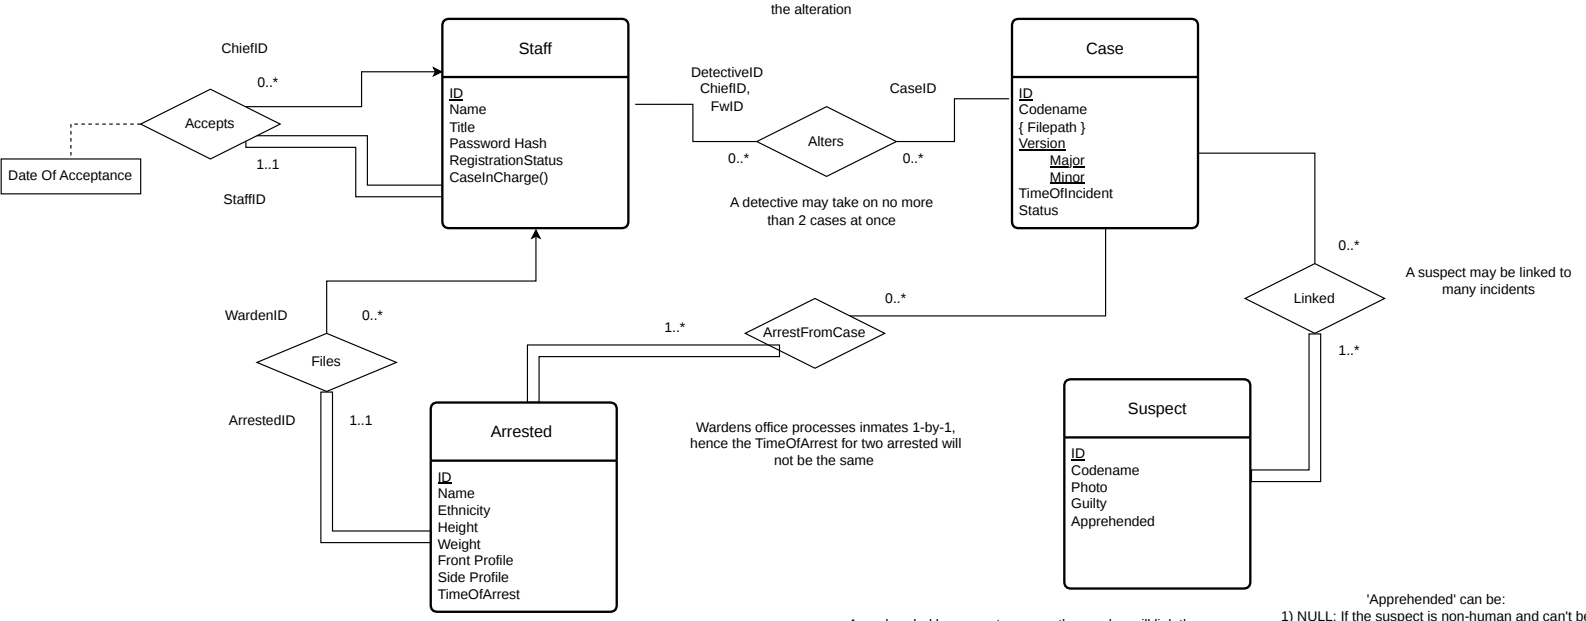
CaseInCharge() may be found out as so:
any FW who edits a case can only create a minor case (y.1, y.2, ...), and any edit/acceptance of minor version by the Chief or Investigator will create a major version x.0
hence any staff member in the 'Alters' table with version != x.0 is a FW.
Furthermore, any staff member in the 'Alters' table where version == x.0 is a Chief or Detective

A log of data modification must be kept to ensure chain of custody.
A FW submits a request to alter data. It is the chief or the investigator who will decide if that change takes place, hence they will be held responsible.
It is also possible that a case can exist temporarily awaiting an approval for the alteration

Status can be:
1) "Awaiting": Case is awaiting rejection/assignment
2) "Ongoing"; case is ongoing
3) "Closed"; only if at large suspects have been arrested

Version:
Initially, As a fieldworker files a case, the version will be 0.1. Anytime any FW alters the case, a new minor version is created. (i.e. 0.2, 0.3). An investigator can choose to accept or reject a minor version, or edit the file itself, in which case a new major version is created. (e.g: a detective accepts version 0.1, and it becomes version 1.0, Later on, they make more edits and version 2.0 is created.)

Only the major versions are stored. Responsibility of the case lies solely on the chief or investigator in charge.



A detective may take on no more than 2 cases at once

Wardens office processes inmates 1-by-1, hence the TimeOfArrest for two arrested will not be the same

To avoid cycles, Arrested is linked with Case only. A case may or may not result in multiple arrests, while an arrest must be from at least 1 case and can be spanning across cases.

Apprehended becomes true once the warden will link the suspect to the arrested via the interface. It will remain True forevermore.

'Apprehended' can be:
1) NULL; If the suspect is non-human and can't be apprehended, OR suspect is not guilty
2) False; Suspect is at large
3) True; Suspect has a relevant record in the Arrested table. It will be derived from the TimeOfArrest
